

# BRAHHM CONTENT STUDIO 3.2

System Overview — Brahhm Arpan Organic Pvt. Ltd.

Version 3.2 | June 2026 | Confidential

## What Is It?

A fully automated content production system built inside Claude Code for Brahhm Arpan Organic Pvt. Ltd. — a D2C organic food company running **5 brands simultaneously**. Instead of briefing a social media agency or a freelancer each time, the founder (Puran) types a single command and the system generates a complete, execution-ready post package — captions, image prompts, reel scripts, ManyChat flows — in minutes.

## The 5 Brands

| Brand           | Aesthetic / Vibe                                    | Website           |
|-----------------|-----------------------------------------------------|-------------------|
| Caveman Organic | Bold, Gen Z, millet-forward — Cave Red world        | caveman.co.in     |
| Health Fields   | Luxury wellness, clinical, Aesop-level premium      | health-fields.com |
| Pusht Organic   | Farm-honest, golden hour, soil and seed             | pusht.in          |
| greendipz       | Flavour-first, cuisine-led, street food bold        | biomart.in        |
| Biomart         | Organic megastore, clean abundant, Whole Foods feel | biomart.in        |

Each brand has its own Brand Bible — tone rules, banned styles, visual language, and hero angles. The system never mixes them up.

## What Gets Generated Per Post — The 13-Point Package

| #  | Deliverable          | Notes                                                      |
|----|----------------------|------------------------------------------------------------|
| 1  | Content Angle        | ATTACK / EDUCATE / RELATE / CONVERT                        |
| 2  | Idea Title           | Descriptive title for the post concept                     |
| 3  | Hook                 | Under 8 words — forces the 'Read More' click               |
| 4  | Execution Concept    | Step-by-step breakdown of the post idea                    |
| 5  | Visual Direction     | Template number, composition, styling notes                |
| 6  | In-Image Text        | Review table — confirmed by Puran before prompt is written |
| 7  | GPT Image 2.0 Prompt | Full structured prompt in code block, paste-ready          |
| 8  | Caption              | Plain text, humanized, brand-correct, with hashtags        |
| 10 | ManyChat Flow        | 3-step DM automation tied to keyword trigger               |

| #  | Deliverable         | Notes                                                   |
|----|---------------------|---------------------------------------------------------|
| 11 | Caption Variation   | Alternative caption with a meaningfully different angle |
| 12 | Why It Will Perform | Psychology and algorithm justification                  |
| 13 | Bundling Suggestion | One complementary product for AOV cross-sell            |

## The Production Pipeline

### Static Posts

### Reel Production — 3-Stage Workflow

| Stage   | Action                                             | Tool          |
|---------|----------------------------------------------------|---------------|
| Stage 1 | Build GPT Image 2.0 still frames                   | GPT Image 2.0 |
| ↓       | Puran generates stills and uploads them            | —             |
| Stage 2 | Analyse stills — composition check, approve frames | Claude Code   |
| ↓       | Only proceed after stills confirmed                | —             |
| Stage 3 | Build animation prompts from approved stills       | Kling 3.0     |
| Post    | Assemble clips, voiceover, SFX, captions           | CapCut        |
| Final   | Logo overlay, price callouts (Puran manually)      | Canva         |

## The Safety Protocols

| Protocol              | Rule                                                                                                                |
|-----------------------|---------------------------------------------------------------------------------------------------------------------|
| 2 — Description Gate  | No product description = no content. The system stops and asks. Never invents claims.                               |
| 3 — Claims Audit      | Every claim extracted and checked. Health claims, therapeutic claims, vague language — only verified facts proceed. |
| 3A — Dynamic Bundling | Silently scans for one complementary product. Weaves into ManyChat Step 3 cross-sell only.                          |
| 4 — Brand DNA Lock    | Reads Brand Architecture Master + active Brand Bible before any copy. Brand voices never bleed into each other.     |
| 5 — Offers & Pricing  | Never includes codes, prices, or offers unless Puran explicitly instructs in that session.                          |
| 6 — Visual Execution  | 20-line GPT prompt structure. In-image text confirmed before prompt is written. No dots on headlines.               |
| 7 — Reverse Engineer  | 7-layer analysis of reference images → STEP 0 compositing detection → new template in creative brief language.      |
| 8 — Reel Production   | 3 hard stages. GPT stills first → Puran uploads → Kling prompts. Never animate baked text. Never skip stages.       |

| Protocol              | Rule                                                                                                     |
|-----------------------|----------------------------------------------------------------------------------------------------------|
| 9 — Caption 3.0       | Hook under 8 words. 3-pass sweep: Humanizer → Copy-edit → Brand DNA check.                               |
| 10 — ManyChat Engine  | Every caption ends with keyword trigger. 3-step DM flow (public reply → immediate DM → 24hr cross-sell). |
| 11 — Hashtag Strategy | Max 3 hashtags. 1 branded + 1 category + 1 discovery. Test 0 hashtags on reels.                          |

## The Skill System — Mandatory Blocking Gates

Before writing any caption or image prompt, the system reads specialized skill files. These are **hard blocking gates** — no output is produced until the relevant skills are read. Every post triggers the core 4 reads, plus additional skills by post type.

| Skill                | Fires When                      | Purpose                                                    |
|----------------------|---------------------------------|------------------------------------------------------------|
| Humanizer            | Every caption                   | Strips 29 AI-writing patterns so copy sounds human-written |
| Social               | Every caption + every hook      | Instagram-native tone, hook formula, engagement logic      |
| Copywriting          | All caption body copy           | Conversion copy principles, CTA framing                    |
| Copy-editing         | Every caption (after humanizer) | Banned words, emoji limit (max 3), voice check             |
| Video                | Every reel brief                | Short-form scripting, hook structure, 9:16 specs           |
| Marketing Psychology | All ATTACK + CONVERT posts      | Loss aversion, identity triggers, social proof, anchoring  |
| Ad Creative          | All CONVERT + boost candidates  | Min 2 variants with meaningfully different angles          |
| Emails / ManyChat    | Every 3-step DM flow            | Drip logic: trigger → value DM → 24hr cross-sell           |
| Launch               | New SKUs + festival campaigns   | Teaser → reveal → proof → urgency → close arc              |
| CRO                  | Any CTA landing on brand sites  | Caption CTA matches landing page promise                   |

## The ManyChat Conversion Layer

Every caption ends with a keyword trigger in the format: **"Comment KEYWORD for [benefit]"**. The system generates the full 3-step DM automation alongside every caption.

| Step                   | Trigger                  | Action                                                         |
|------------------------|--------------------------|----------------------------------------------------------------|
| Step 1 — Public Reply  | User comments keyword    | Account replies publicly: 'Comment received! Check your DMs ✓' |
| Step 2 — Immediate DM  | Immediately after Step 1 | Value message with link or resource delivered to inbox         |
| Step 3 — Cross-sell DM | 24 hours after Step 2    | Pairing suggestion: complementary product recommendation       |

## How Puran Uses It — Command Reference

| Command                                       | Output                                                  |
|-----------------------------------------------|---------------------------------------------------------|
| Full post for Health Fields – Tulsi Green Tea | Complete 13-point post package                          |
| Reel script for Caveman – Millet Cookies      | 3-stage reel production workflow                        |
| This week's plan for all brands               | Full 7-day calendar across all 5 brands                 |
| GPT prompt for greendipz – Kung Pao Sauce     | Image prompt after in-image text confirmation           |
| Batch this week – Biomart                     | All posts for the week in one output                    |
| [Festival] campaign for [Brand]               | Campaign arc: teaser → reveal → proof → urgency → close |
| [Brand] carousel – [Type] – [Product]         | Slide-by-slide carousel + caption + CTA                 |

## Optimal Posting Times (IST)

| Slot         | Time                    | Priority         |
|--------------|-------------------------|------------------|
| Morning      | 7:30 – 8:30 AM          | Standard         |
| Afternoon    | 12:00 – 1:00 PM         | Standard         |
| Peak Evening | 6:30 – 8:00 PM          | Priority — Reels |
| Stories      | 8:00 AM + 8:00 PM daily | Daily both slots |
